

Dashboard App Summary

What it is

A React + Vite single-page dashboard UI with a sidebar and charts rendered via Recharts.
All metrics are static, defined in the frontend.

Who it is for

Users who need an at-a-glance view of customer, organization, and revenue activity.

What it does

- Top-line stats cards for Total customers, Members, and Active now.
- Opportunity stage breakdown shown as a donut chart.
- Deal funnel stages visualized with a horizontal bar chart.
- Revenue vs Leads time series with dual y-axes.
- Sidebar navigation for Dashboard, Customers, Organizations, Upgrade, Settings.
- Date filter button in the UI (no behavior in repo).

How it works (repo-based)

- Entry: src/main.tsx mounts App into #root.
- State: App tracks activeTab and conditionally renders Dashboard.
- UI: Sidebar maps a static menu list to buttons and updates state.
- Data: Dashboard defines in-memory arrays for stats and chart series.
- Charts: Recharts components render Pie, Bar, and Line charts.
- Backend/API: Not found in repo. Data store: Not found in repo.

How to run

- npm install
- npm run dev
